

Practical 1

Installing Ubuntu on VMWare Workstation

Theory: To install Ubuntu on VMware Workstation, start by downloading the Ubuntu ISO file from the official Ubuntu website. Open VMware Workstation and select "Create a New Virtual Machine." Choose "Typical" configuration and click "Next." Select "Installer disc image file (iso)" and browse to the downloaded Ubuntu ISO. Continue through the wizard, setting the operating system as Linux and version as Ubuntu. Specify the virtual machine name and location, then allocate disk space (recommended at least 20GB). Follow the prompts to customize hardware settings if needed, then finish the setup and start the virtual machine. The Ubuntu installer will boot, guiding you through the standard installation process to complete the setup.

Step 1: Click on the link provided below. Now click on “Download for windows” and then click on

<https://vmware-workstation.en.softonic.com/>

Step 2: Open the (.exe) file and install it.

Step 3: Open the link below and download the Ubuntu ISO file.

<https://ubuntu.com/download/desktop>

Installing Ubuntu in VMWare

Step 5: Open the installed VMware application.

Step 6: Click on “Create new virtual machine”. Browse the ISO file that has been downloaded and select it.

Step 7: Enter all the details >> click on next. Personalization of Virtual Machine.

The screenshot shows the 'New Virtual Machine Wizard' window with the 'Easy Install Information' tab selected. The window title is 'New Virtual Machine Wizard'. Below the title bar, the text 'Easy Install Information' is displayed, followed by 'This is used to install Ubuntu 64-bit.' The main area is titled 'Personalize Linux' and contains four input fields: 'Full name:', 'User name:', 'Password:', and 'Confirm:'. Each field has a corresponding text input box. At the bottom of the window, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'.

Step 8: Enter Virtual machine name >> click on next.

The screenshot shows the 'New Virtual Machine Wizard' window with the 'Name the Virtual Machine' tab selected. The window title is 'New Virtual Machine Wizard'. Below the title bar, the text 'Name the Virtual Machine' is displayed, followed by 'What name would you like to use for this virtual machine?'. The main area contains two input fields: 'Virtual machine name:' and 'Location:'. The 'Virtual machine name:' field has a text input box with 'Ubuntu 64-bit' entered. The 'Location:' field has a text input box with 'C:\Users\Admin\Documents\Virtual Machines\Ubuntu 64-bit' entered, and a 'Browse...' button to its right. Below the 'Location:' field, there is a note: 'The default location can be changed at Edit > Preferences.' At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

Step 9: Specify disk capacity >> click on next.

The screenshot shows the 'Specify Disk Capacity' step of the 'New Virtual Machine Wizard'. The window title is 'New Virtual Machine Wizard'. The subtitle is 'Specify Disk Capacity' with the question 'How large do you want this disk to be?'. A text box explains: 'The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.' Below this, 'Maximum disk size (GB):' is set to '20.0' with a spin button. It also states 'Recommended size for Ubuntu 64-bit: 20 GB'. There are two radio buttons: 'Store virtual disk as a single file' (selected) and 'Split virtual disk into multiple files'. A note below the second option says: 'Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.' At the bottom are buttons for 'Help', '< Back', 'Next >', and 'Cancel'.

Step 10: If needed customize the hardware and click on finish.

The screenshot shows the 'Ready to Create Virtual Machine' step of the 'New Virtual Machine Wizard'. The window title is 'New Virtual Machine Wizard'. The subtitle is 'Ready to Create Virtual Machine' with the instruction 'Click Finish to create the virtual machine and start installing Ubuntu 64-bit and then VMware Tools.' A text box states: 'The virtual machine will be created with the following settings:'. Below this is a list of settings: Name: Ubuntu 64-bit, Location: C:\Users\Admin\Documents\Virtual Machines\Ubuntu ..., Version: Workstation 17.x, Operating System: Ubuntu 64-bit, Hard Disk: 20 GB, Memory: 2048 MB, Network Adapter: NAT, and Other Devices: 2 CPU cores, CD/DVD, USB Controller, Printer, Sound... There is a 'Customize Hardware...' button. At the bottom, the checkbox 'Power on this virtual machine after creation' is checked. At the very bottom are buttons for '< Back', 'Finish', and 'Cancel'.

Step 11: Ubuntu has been successfully installed in VMWare. Now open VMware and click on ubuntu-64 which appears on the left panel. (If not directly opened). Select the language and click on next. Select the Normal or Minimal installation based on your requirements.

Step 12: Select Installation type >> Erase disk and install Ubuntu (This will not delete your windows data) >> Click on next..., next....

Step 13: Now click on install.
